Projects

Path Visualizer: I successfully developed a path visualizer for the students to help them to understand Shortest path algorithm in a different way. The UI is very minimal to visualize each and every step. Created with HTML, CSS and Javascript.

KickPro Music Player: I developed a Online streaming music player app just like spotify using JioSaavn free API using Dart as a programming Language.

Clock: Developed a clock application just like google clock using dart where you can set alarms and watch time.

Home Security System using Facial Recognition: I designed and implemented facial recognition as a Engineering Clinics Project using OpenCV library in Python and Telegram API for sending Images. Enhancing user experience in the field of artificial intelligence.

PortFolio Website: I crafted a comprehensive my own portfolio website using HTML, CSS, Javascript.
